
This conference was organized by the International Association for Development of the Information Society (IADIS).

The CSC conference aims at discussing the social, behavioral, technical, economic, and environmental impacts of the introduction of smart city applications and services. The 2018 edition was jointly published with the 7th edition of the International Conference on Theory and Practice in Modern Computing (TPMC 18) and 3rd International Conference on Big Data Analytics, Data Mining and Computational Intelligence 2018. These conferences received 132 submissions from more than 24 countries. Each submission had been anonymously reviewed by an average of five independent reviewers, to ensure that accepted submissions were of a high standard. Consequently, only 22 full papers were approved which means an acceptance rate of 17%. A few more papers were accepted as short papers, reflection papers and posters.

Extended versions of the best papers were selected to be published in:

- IADIS International Journal on Computer Science and Information Systems (ISSN: 1646-3692)

Besides the presentation of full papers, short papers, reflection papers and posters, these events also included one keynote presentation by Professor Pedro Larrañaga, Department of Artificial Intelligence, Technical University of Madrid, Spain.
